Examiner, Art Unit 1786

DETAILED ACTION

The examiner acknowledges the receipt of applicants' arguments and amended claims dated 07/01/2010.

Rejections and objections made in previous office action that do not appear below have been overcome by applicant's amendments and therefore the arguments pertaining to these rejections/objections will not be addressed.

Applicant has successfully overcome the double patenting rejection in the previous office action as HAR in the copending application (11/722,609) is limited to a nitrogen containing six-membered ring.

Allowable Subject Matter

1. The following is a statement of reasons for the indication of allowable subject matter: Applicant claims a heterocyclic compound represented by the following:

Art Unit: 1786

wherein R^{1a} to R^{3a} each represent a substituent, Ar^{1a} to Ar^{2a} each represent a single bond or a divalent connecting group, and HAr represents a group represented by the following general formula (A-3) or (A-4):

wherein R^{4a} to R^{8a} each represent a substituent, with the proviso that R^{6a} does not include an anthracene moiety.

2. The prior art did not show the claimed compound. The closest prior appears to be Yoon (WO 2003/060956) who discloses a derivative of a heterocyclic compound having a nitrogen atom represented by the following general Formula (Y-1) (page 5-7):

wherein

R^1 and R^2 are independently or simultaneously a hydrogen atom, a C_{1-20} aliphatic hydrocarbon, benzene, naphthalene, biphenyl, anthracene, or a group derived from an aromatic heterocycle or an aromatic ring, and R^1 and R^2 cannot simultaneously be hydrogen atoms;

Ar is benzene, naphthalene, biphenyl, anthracene, or a group derived from an aromatic heterocycle or an aromatic ring;

R^4 is a hydrogen atom, a C_{1-12} alkyl or aliphatic hydrocarbon, benzene, naphthalene, biphenyl, anthracene, or a group derived from an aromatic heterocycle or aromatic ring.

The previous rejection was based on R4 being an anthracene group which corresponded to the anthracene group ($R1a-R3a$ = hydrogen) in applicants' Formula A-1 when Ar1a is a single bond; the substituted aryl group in position 1 of the heterocyclic ring of Y-1 corresponded to applicants' R9a position which can be a substituted aryl group. The fragment below shows the basis of the previous rejection:

Yoon reads on compounds with two anthracenyl groups bonded to a single heterocyclic group at the 1 and 2 positions as shown below:

Applicant has amended the claim to exclude R9a from being an anthracene group which effectively eliminates two anthracenyl groups bonded Formula A-4. In the absence of R4 in Formula Y-1 being an anthracene group, the Yoon reference no longer reads on the instant limitations. Yoon provides no guidance which would make it obvious to modify Formula Y-1 to arrive at applicants' claimed compounds.

3. Claims 1-21 allowed.
